Getting to know your 1:1 Laptop- Help Guide for using your computer

Connecting to your 3G at Home-

Your Acer has 2GB of free Telstra 3G internet. Be aware that Telstra is responsible for 3G internet speeds and the school has no control over this. To connect your 3G follow the procedure below-

1. Disconnect all wireless connections. To do this right click on the wireless icon and you will see a list of all available wireless connections. Right click on the connected wireless and hit the disconnect button as shown in the picture below.

2. Once you have disconnected all wireless signals your wireless list should look like this and show you are not connected to anything.

3. Once you have disconnected from all networks go to your main desktop screen and select the Connect 3G Icon as shown below. When you double click on this icon the following box will appear- Hit okay
If you receive this message at the bottom of your screen you are still connected to a wireless network which means you must go back and complete 1 & 2 again as the 3G won’t connect if you are already connected to a network.

4. Next click on the task bar at the bottom right hand side of your screen near the battery icon. It looks like this -

5. When you click on this icon the pin bar will open and you will see your 3G icon. See the picture below. Your 3G icon will resemble green bars underlined by red.

6. **Right click** on the 3G icon and a box will appear asking you to connect to the 3G select connect-
7. Wait approximately 10 seconds and the following prompt will appear.

You will now be connected to Telstra 3G and you will be able to see this in your wireless networks box.

8. To disconnect just repeat steps 5 & 6 and except this time choose disconnect not connect.
